

INTRODUCTION

Pigs-In-Z-Blanket is a unique blend of natural elements that is a targeted neonatal farrowing aid; to rapidly absorb moisture, provide a blanket of exothermic natural warming, capture a wide variety of malic odors targeting ammonia/sulfur in pens and holding areas. Excess moisture in consort with pathogens and mold is in part responsible for the development of environmental illness pressures, while ammonia, sulfide and putrefaction are some of the leading causes of respiratory and scours problems.

Pigs-In-Z-Blanket was developed to interact in a beneficial manner with the amniotic fluid and the skin of the neonatal piglets to ease the birth cycle, conserve energy, provide traction on the birthing mat and speed the time from birth to suckling. In addition, when applied to the underside of the gilt or sow it will assist in a more rapid and even colostrum/milk distribution. Also, it will facilitate umbilical cord drying.

HOW FAST WILL PIGS-IN-Z-BLANKET WORK?

- ▶ **As a drying agent**
Immediately upon contact
- ▶ **As a warming agent**
Within less than 1 minute upon contact with moisture
- ▶ **As a soothing agent**
Within less than 3 minutes upon contact with the moist skin

PRODUCT DESCRIPTION

A dense, natural mineral powder

Sold in 25 lb.-pound buckets.

INGREDIENTS

Natural minerals, natural mineral salts, montmorillonite clay rare earth elements and an anti-caking agent. All ingredients are classified as GRAS (Generally Regarded As Safe).

INFORMATION
SHEET**

APPLICATION RATES FOR SWINE

	Amount		As Needed
Per Piglets	2 - 4 oz (1/4 - 1/2) cup	Evenly Distributed	@ or shortly after birth
Nursery Pens	4-8 oz (1/2-1) cup	Evenly Distributed	when needed
Under Belly	2-4 oz (1/4-1/2) cup	Gilt or Sow	shortly after first birth

PIGS-IN-Z-BLANKET

- 01** A targeted neonatal farrowing aid
- 02** Developed to work in beneficial consort with the amniotic fluid and the skin of the neonatal piglets to ease the birth trauma
- 03** Rapidly absorb moisture providing a blanket of exothermic natural warming
- 04** Capture a wide variety of malic odors targeting ammonia/sulfur in pens and holding areas
- 05** When applied to the birth mat will absorb moisture and provide traction for the piglet
- 06** Controls moisture thus reduces pathogenic bacteria
- 07** Dries the umbilical cord rapidly and evenly. Helps to seal wounds
- 08** Reduces incidents of respiratory and scours problems
- 09** Eases pangs of birthing cycle when applied to the underside of the gilt or sow and it will assist in a more even let down of their colostrum/milk
- 10** Test have shown that after application, the piglet time to teat is less than 5 minutes and often faster (as little as 3 minutes)

APPLICATION OF PIGS-IN-Z-BLANKET

- ▶ May be sprinkled by hand, cup or a flour sifter, concentrating the product onto the wettest areas.
- ▶ May be used as a dip or showered on to newborn piglets to retain body heat, soothe and warm.
- ▶ Should be sprinkled onto the birth mat to absorb moisture and provide traction for the piglet.
- ▶ Spritz warm clean water onto the underside of the sow then sprinkle on for a soothing, warming effect.
