Terra Secure

GROWING SUSTAINABLE RELATIONSHIPS

Terra Secure is a Naturally Formulated Plant nutrient source and soil amendment product. It is a viable source of essential growth nutrients as well as very important soil microbials, amino acids and humates which are sourced and extracted from natural renewable inputs. The natural non-salt non-chemical based nutrients are immediately available, and at no risk of fertilizer burn or harm to growing plants. The large number of plant soil essential microbials makes this product a viable resource for increasing soil health bringing soil back to productive life.

01

Contains chelated nitrogen and other chelated plant essential nutrients derived from non-chemical natural sources for immediate plant available use. As well as a variety of Nitrogen fixation bacteria (Azorhizobium)

02

Contains amino and L-amino acids essential for plant growth and health. Through their ability to aid the plant to uptake and utilize available nutrients and prevent diseases, they lessen plant stress in all growth stages and environments. **(Alanine, Arginine, Aspartic Acid, Cystine, Glutamic Acid, Glycine, Histidine, Isoleucine, Leucine, Total Lysine, Methionine, Phenylalanine, Proline, Tryptophan, Serine, Threonine, Tyrosene and Valine.)**

03

Contains several species of Mycorrhizae, Trichoderma as well as a large variety of Microbes to aid and build a healthy microbial balanced soil.

Label

Use in same manner as conventional Liquid Fertilizer at a rate of **One Gallon Per Acre**. Terra Secure can be applied by ground spray, aerial application or chemigation either as a foliar application or pre-plant.

Small Applications

Home and garden use, mix at a ratio of 1 part Terra Secure to 10 parts clean water and apply to plants with spray wand or saturate area around plant base.

Available in 1 gal, 5 gal, 55 gal, 250 gal and bulk

One Gallon Per Acre

Renewable and Biodegradable;
Making it Environmentally Sustainable.
